Year 5 Exploring Outer Space

Last week, Year 5 had an amazing opportunity to step inside the Science Dome, where they were transported on an incredible journey through space! As part of their Earth and Space topic, the children learned all about the planets in our solar system — and were amazed to see them come to life right above their heads.

Inside the darkened dome, the children watched as the planets swirled and spun across the ceiling, bringing their learning to life in a truly magical way. They explored the Sun, Moon, and planets, discovering fascinating facts about how they move.

The children especially enjoyed the interactive elements of the experience — from zooming in on different planets to watching stars twinkle all around them. One pupil said, *“I loved seeing the planets come to life!”*

It was a fantastic experience that has really sparked curiosity and excitement about science and space. Year 5 can’t wait to continue their learning back in the classroom!
